AI SYSTEMS

Agentic workflow design
Multi-agent orchestration
RAG and vector embeddings
Human-in-the-loop design
Claude Code

PRODUCT

0-to-1 product definition
Hypothesis-driven strategy
Customer discovery
User research
Experimentation and A/B testing

TECHNICAL

Python
SQL
REST APIs
Data pipelines
React Native / TypeScript
Azure DevOps
GitHub
Adobe Analytics
Tableau
Advanced Excel / VBA

EDUCATION

University of North Texas
B.S. Economics, Minor in
Mathematics

JAMES TEELING

Product Manager | 0-to-1 Builder | AI Systems at Consumer Scale

SUMMARY

I build the thing nobody asked for, and it gets adopted: a work-management tool at Affirmity, an agentic AI system now in production across American Airlines' mobile org, an iOS app on the App Store, a multi-agent research platform an M&A firm runs daily. Day job: consumer growth and consent on the American Airlines app, opt-ins from 400K to 10.7M. Full story behind every build at james-teeling.com. I'm looking for a team where building it is the job, not the side project.

EXPERIENCE

Product Manager, Mobile App (previously Program Manager, Delivery Transformation)

American Airlines | Dallas, TX | Oct 2021 - Present

Own the permission and consent surfaces of an app with 15M AAdvantage members, 1M+ daily active users, and a 4.6-star rating: push-notification opt-in mechanics, the app download screen, Airship marketing opt-in campaigns, and the Preference Center. Every flow that asks a customer to say yes.

- Broke an open-ended exec mandate into a phased, tested rollout; owned legal/compliance review, design, and dev end to end. Opt-ins: 400K to 10.7M. One campaign off that base: \$15.6M.
- Shipped a contextual opt-in card on the Trips page, offering push permission exactly when a flight makes the value obvious. Testing on Trips before expanding fleet-wide.
- Built a Python pipeline that mines customer feedback for emerging themes and quantifies demand, replacing gut-feel prioritization with evidence.

Project Manager, Vendor Management

Cotality (formerly CoreLogic) | Irving, TX | Jan 2020 - Oct 2021

Managed the transition of the vendor-contract program from in-house to outsourced delivery: stakeholder alignment, timeline ownership, and clearing roadblocks across legal, procurement, and the receiving vendor.

- Unified a dozen scattered contract-data sources into one searchable system of record without disrupting how any team already worked. Tripled visibility; 87% adoption, earned not mandated.

Senior Data Analyst

Affirmity (formerly Peoplefluent) | Dallas, TX | Dec 2011 - Dec 2019

- Built the team's work-management system from scratch, nobody asked. It became how the team ran every project.
- Eliminated the single point of failure in client delivery with client-specific automations, so any analyst could cover any project.
- Cut project turnaround 82% and workflow efficiency 60% by automating the project-to-analyst handoff.
- Ran user research, prioritized with engineering, and drove the internal tool to 100% adoption: the PM job before I had the title.

SELECTED PROJECTS

Full portfolio at james-teeling.com

PO Copilot: Agentic AI System for Product Owners *Built for myself, now in production at American Airlines*

Python | RAG and vector embeddings | Azure DevOps REST API | SQLite | Human-in-the-loop

Built for myself first: my own stories were incomplete and I kept hitting conflicting Business Rules in QA. AI interviews the PO for edge cases, drafts a Definition-of-Ready ticket with cited retrieval, PO approves before it hits Azure DevOps. Intake: 30-45 min to about 5. Other POs saw it and wanted it; now rolling out through the company's internal training program, mobile team first.

AI-Assisted M&A Origination and Research System *Built independently, in daily use at an M&A firm*

Claude Code | Multi-agent orchestration

Specialized agents research companies, maintain living client investment theses, generate targeted lists, and score fit against the thesis in real time. AI drafts; humans decide.

Full Squish: Mountain Bike Suspension App *Live on the App Store*

React Native | Expo | TypeScript | AI pair programming

Designed, built, and shipped a consumer iOS app solo. Mountain bikers log and recall suspension setups by riding style and trail type. Version 2 in development. apps.apple.com/us/app/fullsquish
