JAMES TEELING

Product Manager · AI Systems & Agentic Workflows · 0-to-1 Builder

SUMMARY

Hands-on Product Manager who ships. I pair product strategy and customer discovery with the technical depth to build the thing myself — agentic AI workflows, RAG systems, data pipelines, and mobile apps that reach real users. Ten-plus years turning ambiguous problems into shipped product at American Airlines, Cotality, and Affirmity, alongside a portfolio of independent builds ranging from a published App Store release to a multi-agent M&A research system.

EXPERIENCE

Product Manager — Mobile App

previously Program Manager, Delivery Transformation
American Airlines | *Dallas, TX* | *Oct 2021 – Present*

- Grew marketing opt-ins from 400K to 10.7M users by redesigning the customer-journey flow around a clear value exchange, enabling a single campaign to generate \$15.6M.
- Built an agentic PM workflow that converts unstructured input into Definition-of-Ready-compliant features and user stories with acceptance criteria, pushing directly to Azure DevOps via REST API and auto-generating analytics intake documentation.
- Built a reusable Python pipeline that analyzes unstructured customer feedback, identifies emerging themes, and quantifies demand to drive roadmap prioritization, eliminating recurring AI token costs.
- Led the enterprise-wide migration to a consolidated work-management platform, building integration data pipelines that reduced licensing costs; reached full adoption across 5,000+ employees in under 12 months.
- Resolved enterprise-wide misalignment by forming a cross-portfolio team that established a unified way of working across 5+ internal organizations.

Project Manager — Vendor Management

Cotality (formerly CoreLogic) | *Irving, TX* | *Jan 2020 – Oct 2021*

- Increased vendor-contract visibility 200% by launching an automated SharePoint-linked dashboard that replaced manual reporting with live data.
- Drove an 87% lift in data-hygiene adoption by training the contracting team and embedding the dashboard into their weekly workflow.

Principal Data Engineer

Affirmity (formerly Peoplefluent) | *Dallas, TX* | *Dec 2011 – Dec 2019*

- Cut project turnaround time 82% with an automated data pipeline that removed project-to-analyst bottlenecks and raised workflow efficiency 60%.
- Ran user research on a proprietary data tool and prioritized the features delivering the highest user value, driving adoption to 100%.

PO Copilot — Agentic AI Workflow for Product Owners

Agentic Workflow · RAG · Vector Embeddings · Azure DevOps API · Python

Built for Product Owners and Product Managers at a major US airline. A rough idea becomes a Definition-of-Ready-gated Azure DevOps work item through a guided conversation, with a two-pass RAG layer that surfaces conflicting business rules while the story is still being written and analytics intake documents generated automatically.

AI-Assisted M&A Origination System — Multi-Agent Research Platform

Claude Code · Multi-Agent Orchestration · MCP · Human-in-the-Loop · Durable Data Layer

Architecting a multi-agent workflow for an M&A firm: specialized agents research companies, maintain living client investment theses, generate targeted lists, and score company-to-client fit on a durable data layer that gives the firm compounding memory. AI drafts; humans decide.

Full Squish — Mountain Bike Suspension App (live on the App Store)

React Native · Expo · TypeScript · GitHub · AI Pair Programming

Shipped a consumer iOS app that lets mountain bikers log and save suspension configurations for different riding styles and trail types, turning setup guesswork into structured experimentation.

apps.apple.com/us/app/fullsquish

Bike Fit Calculator — Python / Flask Web App

Python · Flask · AWS · JavaScript · HTML/CSS

Calculates a bike's RAD measurement against a rider's measurement to solve inconsistent frame sizing across the industry. Deployed on AWS. Developed pre AI.

github.com/NostraJames/bikefitcalculator

Alpha Vidiris — Tabletop Game Designed 0-to-1

Product Discovery · User Research & Testing · A/B Testing · Fusion 360 / CAD

Designed a space exploration and combat board game from the ground up, running user testing and tight feedback loops on rules, mechanics, and physical pieces to reach an intuitive game with real strategic depth.

github.com/NostraJames/alphavidiris

Sonos Amp Cooling System — Hardware Product Design

Problem Framing · Fluid Dynamics · Fusion 360 / CAD · 3D Printing

Designed a purpose-built cooling system for Sonos amplifiers failing in an unventilated utility closet, holding audio performance through extended home-theater sessions without relocating the hardware.
